100

100% of the time, the system will be able to correctly identify the target object.

For example, if we want to detect a car, the system will be able to correctly identify it 100% of the time.

If we want to detect a person, the system will be able to correctly identify them 100% of the time.

If we want to detect a dog, the system will be able to correctly identify them 100% of the time.

If we want to detect a cat, the system will be able to correctly identify them 100% of the time.

If we want to detect a bird, the system will be able to correctly identify them 100% of the time.

If we want to detect a person, the system will be able to correctly identify them 100% of the time.

If we want to detect a dog, the system will be able to correctly identify them 100% of the time.

If we want to detect a cat, the system will be able to correctly identify them 100% of the time.

If we want to detect a bird, the system will be able to correctly identify them 100% of the time.

If we want to detect a person, the system will be able to correctly identify them 100% of the time.

If we want to detect a dog, the system will be able to correctly identify them 100% of the time.

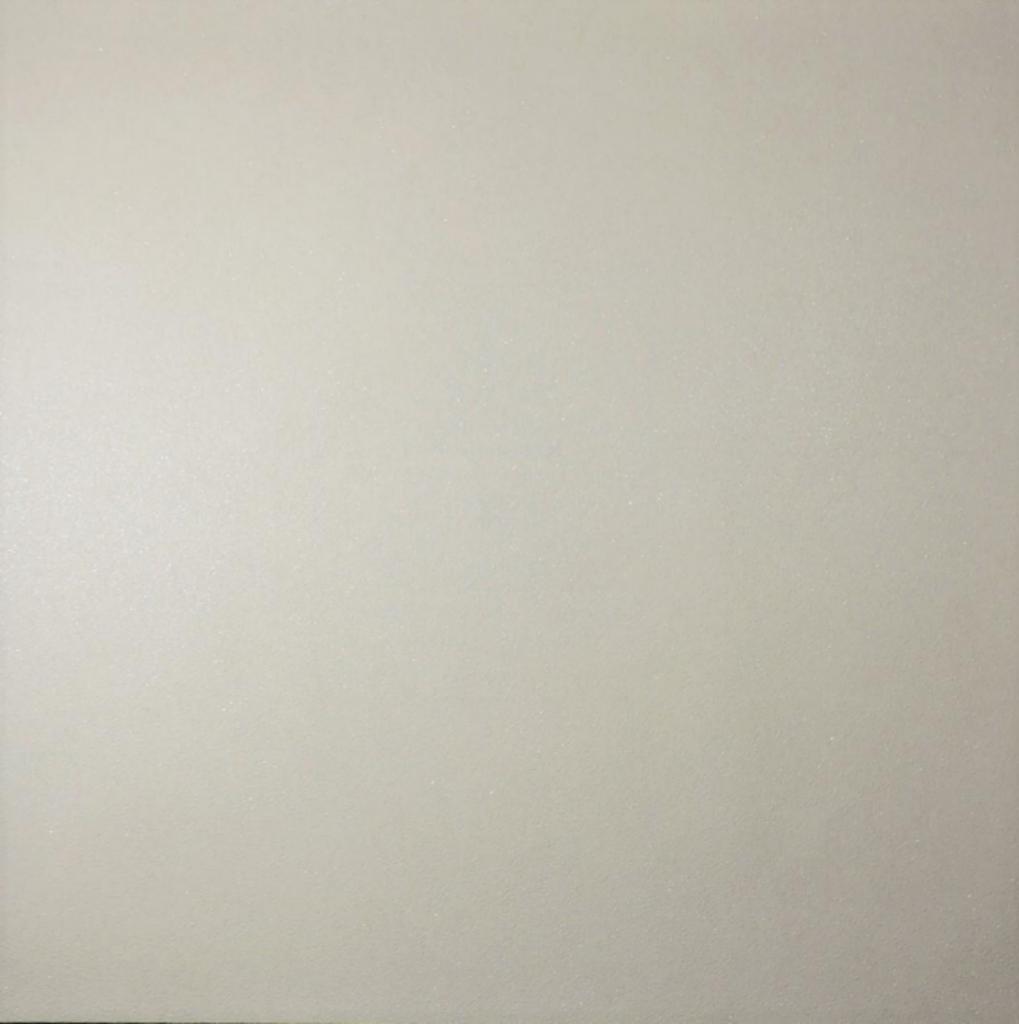

If we want to detect a cat, the system will be able to correctly identify them 100% of the time.

If we want to detect a bird, the system will be able to correctly identify them 100% of the time.

If we want to detect a person, the system will be able to correctly identify them 100% of the time.

If we want to detect a dog, the system will be able to correctly identify them 100% of the time.

If we want to detect a cat, the system will be able to correctly identify them 100% of the time.
